

Concept Engineer

As a Concept Engineer, you fulfill an essential role in the inquiry and sales phase. You will be involved in the development of technical production solutions for our Automotive Seating clients. Leveraging your technical expertise, you will analyze customer needs and translate inquiries into a concrete program of requirements and functional concept designs that are both technically and commercially attractive, taking into account cycle times, feasibility, and potential risks. Additionally, you will also perform the calculation of your concept. You will thus be versatile in roles as a Concept and Cost Engineer, bringing an added dimension of challenge to your position. As a Concept Engineer at the forefront of the sales process, we consider it essential that you possess a strong sense of ownership, creative skills, and both commercial and technical insight. Together with the team, you will convince customers of our added value!
