

Electrical Technician

As an Electrical Technician, you are responsible for the electrical assembly, cabling, and connection of our Intralogistics machines. You work according to drawings, schematics, and work instructions on reliable subsystems that meet high quality and safety standards.

From complex cabling systems and control cabinets to complete automated machine setups, you will work on innovative, technically advanced projects that are deployed worldwide at our customers' sites.

Your tasks include, among others:

- Cabling and connecting components, motors, sensors, and control cabinets
- Installing and fitting cable trays and electrical components
- Testing subsystems, identifying, and resolving malfunctions
- Reading and interpreting electrical schematics and EPLAN drawings
- International deployment for machine installation and commissioning at customer sites

You will work in a professional and engaged team where collaboration, precision, and responsibility for quality and safety are central, and where you can take pride in the results achieved together.
