

Mechanical Technician

From advanced transport systems and handling modules to fully automated machine setups, you will work on challenging and innovative projects that help our customers improve efficiency and productivity.

As a Mechanical Technician, you are responsible for the mechanical assembly, construction, and installation of our Intralogistics machines. You will work on high-quality, automated systems that are deployed worldwide.

Your main responsibilities include:

- Assembling modules, frames, and moving components
- Installing pneumatic components and cooling systems
- Adjusting, testing, and inspecting machine functions
- Identifying technical issues and collaborating with the Project Coordinator or Senior Technician to resolve them
- Contributing ideas to improve quality, efficiency, and assembly workflow
- (Inter)national deployment for machine installation and commissioning at customer sites
- You will join a **dedicated and professional team** where collaboration, precision, and pride in your work are central to everything we do.
