

Projectmanager Intralogistics

As a Project Manager, your biggest challenge lies in working within an international, multidisciplinary technical environment. Specifically, you will manage projects and programs for an American Retailer. Your project team may consist of 5-20 engineers, working together to create impactful technical solutions. You are the driving force connecting the team and leading the project to success. You will communicate directly with the client, define the context and scope, and translate abstract needs into tangible results—often at a fast pace.

Your responsibilities will include:

- Managing complex (technical) projects with high impact;
- Actively engaging with the client to understand and translate their needs and wishes into solutions;
- Delivering various projects on time, within budget, and meeting quality standards;
- Motivating and collaborating with a multidisciplinary team (Mechanical, Software, Hardware, Robotics, Manufacturing Engineering, Quality, and Production);
- Managing technical and financial project risks and aligning with the client.

What do we expect from you?

You play a key role in managing expectations, understanding customer needs, and providing creative solutions. At the same time, you are highly organized and maintain an overview at all times. We believe that an entrepreneurial mindset combined with a hands-on, no-nonsense approach is essential for success in this role. You handle time pressure well and take responsibility with confidence. You are decisive and know how to inspire your colleagues to take action through strong leadership.
