

# Mechatronics mechanic automotive

As a Mechatronics Mechanic, you will be the key figure in building our automated automotive machines during the nominal phase. Whether it's single welding cells or complex automated production lines, you guarantee success!

## **What will you do?**

As a Mechatronics Mechanic, you are responsible for the careful assembly of electrical and mechanical parts, components, sensors, cabling and (sub)systems. You know how to turn this into a high-quality assembly process, bringing the machines you are responsible for to life. In the final phase of the project, you work with the team to ensure flawless transport and successful commissioning on site at our international customers. An independent role within a multidisciplinary project team. This position also offers you the opportunity to progress to Senior Mechanic!
