

Robot Programmer

Working as a Robot Programmer at AWL means working in a dynamic, competitive, international environment with high-end production solutions and demanding customers. You are part of an enthusiastic team of engineers.

As a Robot Programmer, your challenge and responsibility are to prepare and translate the customers required functional specifications of the robot and peripheral equipment into concrete robot control programs, within the time frame and quality requirements. You will be working on projects for a certain period and have final responsibility for the robotics part. At least 50 percent of your work will be executed directly in the plants of our customers. In addition you:

- Develop test plans and work instructions;
- Execute preparatory tasks for the transfer/training of our customers;
- Work closely with your colleagues from PLC Control, Robot Welding and Assembly.
