

# Mechanical technician

As a Mechanical Mechanic, you will be responsible for the mechanical assembly of our high-tech machines. You will work on:

- Assembling mechanical parts according to technical drawings(3D).
- Installation of pneumatic systems and cooling.
- Adjusting and testing machines.
- Working together with colleagues in a technically challenging environment.

Your eye for detail ensures a neat and structured workplace and you actively contribute to the progress of the project. You discuss any technical challenges with the Project Coordinator or Senior Mechanic. Finally, you assemble and commission the machine at our customers worldwide - a great opportunity to see the result of your work in practice!
