

# Mechatronics Technician

As a Mechatronics Technician you play a crucial role in our team. With your expertise you handle both the electrical and mechanical assembly of components, sensors, cabling and subsystems within our advanced machines for the automotive industry. You work to the highest quality standards and always strive for perfection, because that is what we stand for.

With your eye for detail you ensure that all necessary materials are available at the workstation so that the workflow runs smoothly. You also guide technicians within your discipline, contribute to planning and support new colleagues as they settle into their roles.

You work across a wide range of projects, from individual welding cells to highly complex automated production lines. This variety ensures continuous technical challenge.

And there is more. Together with an enthusiastic project team made up of different disciplines you ensure that our machines are transported flawlessly and successfully commissioned at customer locations all over the world. How exciting is it to install a machine you built yourself at the customer's site?
