

# **Mechatronics Technician in the Automotive**

As a Mechatronics Technician, you play a crucial role in our team! With your expertise, you take care of both the electrical and mechanical assembly of components, sensors and cabling and (sub)systems in our advanced automotive machines. You always strive for perfection and work to the highest quality standards, because that is what we stand for!

With your eye for detail, you ensure that all necessary materials are present at the workplace so that the work runs smoothly. You also supervise fitters within your own discipline, contribute to the planning and supervise new colleagues.

You work on a wide range of projects, from single welding cells to complex automated production lines. This variety ensures constant challenge in projects! And that's not all! Together with an enthusiastic project team, with various professional disciplines, you will ensure that our machines are transported flawlessly and commissioned successfully at locations all over the world. How cool is it to install the machine you built yourself at the customer's site?
